Compare		Shows a hint how to compare documents.
Configure Kate...	Main: Ctrl+Shift+,	Configure various aspects of this application and the editing component.
Configure Keyboard Shortcuts...	Main: Ctrl+Alt+,	Configure the application's keyboard shortcut assignments.
Configure Language...		
Configure Toolbars...		Configure which items should appear in the toolbar(s).
Copy Location		Copies the file path of the current file to clipboard.
Delete		Deletes the file belonging to the current document.
Donate		
Downward Split View		Make the split view intuitively downward the active one.
Find Action...	Main: Ctrl+Alt+I	
Focus Navigation Bar	Main: Ctrl+Shift+.	
Full Screen Mode	Main: F11	

Action Name	Shortcuts	Description
Go to Next Location	Main: Ctrl+Shift+1	
Go to Previous Location	Main: Ctrl+1	
Hamburger Menu Toolbar		
Hide Inactive Views		Hide every view but the active one
Kate Handbook	Main: F1	
Left Split View		Make the split view intuitively on the left the active one.
Main Toolbar		
Manage Sessions...		
Move Document to New Horizontal Split		Split the currently active view horizontally into two views and move the currently active document to view below.
Move Document to New Vertical Split		Split the currently active view vertically into two views and move the currently active document to right view.
Move Splitter Down		Move the splitter of the current view down
Move Splitter Left		Move the splitter of the current view to the left
Move Splitter Right		Move the splitter of the current view to the right
Move Splitter Up		Move the splitter of the current view up
New	Main: Ctrl+N	Create a new document
New Session		
New Window	Main: Ctrl+Shift+N	Create a new window.
Next Item	Main: Alt+Shift+Right	
Next Split View	Main: F8	Make the next split view the active one.
Next Tab	Main: Alt+Right Alternate: Forward	Focus the next tab.
Open Containing Folder		Copies the file path of the current file to clipboard.
Open Menu		
Open Recent		This lists files which you have opened recently, and allows you to easily open them again.
Open...	Main: Ctrl+O	Open an existing document for editing

Action Name	Shortcuts	Description
Plugins Handbook		This shows help files for various available plugins.
Previous Item	Main: Alt+Shift+Left	
Previous Split View	Main: Shift+F8	Make the previous split view the active one.
Previous Tab	Main: Alt+Left Alternate: Back	Focus the previous tab.
Properties		Deletes the file belonging to the current document.
Quick Fix	Main: Ctrl+.	
Quick Open	Main: Ctrl+Alt+O	Open a form to quick open documents.
Quit	Main: Ctrl+Q	Close this window
Reload All		Reload all open documents.
Rename...		Renames the file belonging to the current document.
Report Bug...		
Right Split View		Make the split view intuitively on the right the active one.
Save All	Main: Ctrl+L	Save all open, modified documents to disk.
Save Session		
Save Session As...		
Sessions		
Show File Git History		
Show Menubar	Main: Ctrl+M	Show Menubar Shows the menubar again after it has been hidden
Show Navigation Bar		
Show Path in Titlebar		Show the complete document path in the window caption
Show Statusbar		Use this command to show or hide the view's statusbar
Show Tabs		Use this command to show or hide the tabs for the views
Split Horizontal	Main: Ctrl+Shift+T	Split the currently active view horizontally into two views.
Split Vertical	Main: Ctrl+Shift+L	Split the currently active view vertically into two views.
Toggle Orientation		Toggles the orientation of the current split view

Action Name	Shortcuts	Description
Upward Split View		Make the split view intuitively upward the active one.
Welcome Page		Show the welcome page
What's This?	Main: Shift+F1	
Next Document	Main: Alt+Down	
Previous Document	Main: Alt+Up	
Save		
Save As		
Show Active Document		
Focus Terminal Panel	Main: Ctrl+Shift+F4	
Pipe to Terminal		
Run Current Document		
Show Terminal Panel	Main: F4	
Synchronize Terminal with Current Document		
Add Byte Order Mark (BOM)		Enable/disable adding of byte order marks for UTF-8/UTF-16 encoded files while saving
Add Caret above Cursor	Main: Ctrl+Alt+Up	Adds a caret in the line above the current caret.
Add Caret below Cursor	Main: Ctrl+Alt+Down	Adds a caret in the line below the current caret.
Add Cursors to Line Ends	Main: Alt+Shift+I	Creates a cursor at the end of every line in selection.
Align On...		This command aligns lines in the selected block or whole document on the column given by a regular expression that you will be prompted for.

If you give an empty pattern it will align on the first non-blank character by default.
If the pattern has a capture it will indent on the captured match.

Examples:
With '-' it will insert spaces before the first '-' of each lines to align them all on the same column.
With ':\s+(.)' it will insert spaces before the first non-blank character that occurs after a colon to align them all on the same column. |
| Apply Word Wrap | | Use this to wrap the current line, or to reformat the selected lines as |

Action Name	Shortcuts	Description
		paragraph, to fit the 'Wrap words at' setting in the configuration dialog. This is a static word wrap, meaning the document is changed.
Auto Reload Document		Automatic reload the document when it was changed on disk
Automatic Spell Checking	Main: Ctrl+Shift+O	Enable/disable automatic spell checking
Backspace	Main: Backspace Alternate: Shift+Backspace	
Block Selection Mode	Main: Ctrl+Shift+B	This command allows switching between the normal (line based) selection mode and the block selection mode.
Capitalize	Main: Ctrl+Alt+U	Capitalize the selection, or the word under the cursor if no text is selected.
Change Dictionary...		Change the dictionary that is used for spell checking.
Clean Indentation		Use this to clean the indentation of a selected block of text (only tabs/ only spaces). You can configure whether tabs should be honored and used or replaced with spaces, in the configuration dialog.
Clear All Bookmarks		Remove all bookmarks of the current document.
Clear Dictionary Ranges		Remove all the separate dictionary ranges that were set for spell checking.
Clipboard History Paste	Main: Ctrl+Alt+Shift+V	
Comment	Main: Ctrl+D	This command comments out the current line or a selected block of text. The characters for single/multiple line comments are defined within the language's highlighting.
Copy	Main: Ctrl+C Alternate: Ctrl+Ins	Use this command to copy the currently selected text to the system clipboard.
Copy as HTML		Use this command to copy the currently selected text as HTML to the system clipboard.
Cut	Main: Ctrl+X Alternate: Shift+Del	Cut the selected text and move it to the clipboard

Action Name	Shortcuts	Description
Decrement Number by 0.1		
Decrement Number by 1		
Decrement Number by 10		
Delete Line	Main: Ctrl+K	
Delete Next Character	Main: Del	
Delete Tag Under Cursor		
Delete Word Left	Main: Ctrl+Backspace	
Delete Word Right	Main: Ctrl+Del	
Deselect	Main: Ctrl+Shift+A	If you have selected something within the current document, this will no longer be selected.
Duplicate Selected Lines Down		
Duplicate Selected Lines Up		
Dynamic Word Wrap		If this option is checked, the text lines will be wrapped at the view border on the screen. This is only a view option, meaning the document will not changed.
Dynamic Word Wrap Indicators		Choose when the Dynamic Word Wrap Indicators should be displayed
Editing		
Emmet		
Encoding		
End of Line		Choose which line endings should be used, when you save the document
Enlarge Font	Main: Ctrl++ Alternate: Ctrl+=	This increases the display font size.
Evaluate a Simple Math Expression		
Expand Abbreviation		
Export as HTML...		This command allows you to export the current document with all highlighting information into a HTML document.
Find Next	Main: F3	Look up the next occurrence of the search phrase.
Find Previous	Main: Shift+F3	Look up the previous occurrence of the search phrase.
Find Selected	Main: Ctrl+H	Finds next occurrence of selected text.

Action Name	Shortcuts	Description
Find Selected Backwards	Main: Ctrl+Shift+H	Finds previous occurrence of selected text.
Find and Select All Occurrences	Main: Ctrl+Alt+Shift+J	Finds all occurrences of the word under cursor and select them.
Find and Select Next Occurrence	Main: Alt+J	Finds next occurrence of the word under cursor and add it to selection.
Find...	Main: Ctrl+F	Look up the first occurrence of a piece of text or regular expression.
Fold Toplevel Nodes	Main: Ctrl+Shift+-	
Format Indentation		Use this to auto indent the current line or block of text to its proper indent level.
Go to Line...	Main: Ctrl+G	This command opens a dialog and lets you choose a line that you want the cursor to move to.
Go to Matching Bracket	Main: Ctrl+6	
Go to Next Edit Point		
Go to Next Editing Location	Main: Ctrl+Shift+E	
Go to Next Modified Line		Move downwards to the next modified line.
Go to Previous Edit Point		
Go to Previous Editing Location	Main: Ctrl+E	
Go to Previous Modified Line		Move upwards to the previous modified line.
Increment Number by 0.1		
Increment Number by 1		
Increment Number by 10		
Indent	Main: Ctrl+I	Use this to indent a selected block of text. You can configure whether tabs should be honored and used or replaced with spaces, in the configuration dialog.
Insert Smart Newline	Main: Shift+Return Alternate: Shift+Enter	Insert newline including leading characters of the current line which are not letters or numbers.
Insert Tab Character		
Insert a Newline Above Current Line	Main: Ctrl+Alt+Return Alternate: Ctrl+Alt+Enter	Insert a new line above current line without modifying the current line.
Insert a Newline Below Current Line	Main: Ctrl+Shift+Return Alternate: Ctrl+Shift+Enter	Insert a new line below current line without modifying the current line.

Action Name	Shortcuts	Description
Insert a Non-Indented Newline	Main: Ctrl+Return Alternate: Ctrl+Enter	Insert a new line without indentation, regardless of indentation settings.
Invoke Code Completion	Main: Ctrl+Space	Manually invoke command completion, usually by using a shortcut bound to this action.
Join Lines	Main: Ctrl+J	
Lowercase	Main: Ctrl+Shift+U	Convert the selection to lowercase, or the character to the right of the cursor if no text is selected.
Mark Currently Selected Occurrence as Skipped	Main: Alt+K	Marks the currently selected word as skipped.
Move Cursor Left	Main: Left	
Move Cursor Right	Main: Right	
Move Cursor to Matching Tag		
Move Cursor to Next Matching Indent	Main: Alt+Shift+Down	
Move Cursor to Previous Matching Indent	Main: Alt+Shift+Up	
Move Lines Down	Main: Ctrl+Shift+Down	
Move Lines Up	Main: Ctrl+Shift+Up	
Move Word Left	Main: Ctrl+Left	
Move Word Right	Main: Ctrl+Right	
Move to Beginning of Document	Main: Ctrl+Home	
Move to Beginning of Line	Main: Home	
Move to Bottom of View	Main: Alt+End	
Move to End of Document	Main: Ctrl+End	
Move to End of Line	Main: End	
Move to Next Line	Main: Down	
Move to Previous Line	Main: Up	
Move to Top of View	Main: Alt+Home	
Navigation		
Next Bookmark	Main: Alt+PgDown	Go to the next bookmark.
Overwrite Mode	Main: Ins	Choose whether you want the text you type to be inserted or to overwrite existing text.

Action Name	Shortcuts	Description
Paste	Main: Ctrl+V Alternate: Shift+Ins	Paste previously copied or cut clipboard contents
Paste Selection	Main: Ctrl+Shift+Ins	Paste previously mouse selection contents
Previous Bookmark	Main: Alt+PgUp	Go to the previous bookmark.
Print Preview		Show print preview of current document
Print...	Main: Ctrl+P	Print the current document.
Read Only Mode		Lock/unlock the document for writing
Redo	Main: Ctrl+Shift+Z	Revert the most recent undo operation
Reload	Main: F5 Alternate: Refresh	Reload the current document from disk.
Remove Cursors from Empty Lines		Remove cursors from empty lines
Remove Duplicates and Sort Selected Text Alphabetically		
Replace...	Main: Ctrl+R	Look up a piece of text or regular expression and replace the result with some given text.
Reset Font Size	Main: Ctrl+0	This resets the display font size.
Reuse Word Above	Main: Ctrl+8	
Reuse Word Below	Main: Ctrl+9	
Save	Main: Ctrl+S	Save the current document
Save As with Encoding...		
Save As...	Main: Ctrl+Shift+S	Save the current document to disk, with a name of your choice.
Save Copy As...		Save a copy of the current document to disk.
Scroll Line Down	Main: Ctrl+Down	
Scroll Line Up	Main: Ctrl+Up	
Scroll Page Down	Main: PgDown	
Scroll Page Up	Main: PgUp	
Select All	Main: Ctrl+A	
Select Character Left	Main: Shift+Left	

Action Name	Shortcuts	Description
Select Character Right	Main: Shift+Right	
Select HTML/XML Tag Contents Inwards		
Select HTML/XML Tag Contents Outwards		
Select Next Edit Point		
Select Page Down	Main: Shift+PgDown	
Select Page Up	Main: Shift+PgUp	
Select Previous Edit Point		
Select Word Left	Main: Ctrl+Shift+Left	
Select Word Right	Main: Ctrl+Shift+Right	
Select to Beginning of Document	Main: Ctrl+Shift+Home	
Select to Beginning of Line	Main: Shift+Home	
Select to Bottom of View	Main: Alt+Shift+End	
Select to End of Document	Main: Ctrl+Shift+End	
Select to End of Line	Main: Shift+End	
Select to Matching Bracket	Main: Ctrl+Shift+6	
Select to Next Line	Main: Shift+Down	
Select to Previous Line	Main: Shift+Up	
Select to Top of View	Main: Alt+Shift+Home	
Set Bookmark	Main: Ctrl+B	If a line has no bookmark then add one, otherwise remove it.
Shell Completion		
Show Folding Markers		You can choose if the codefolding marks should be shown, if codefolding is possible.
Show Icon Border		Show/hide the icon border. The icon border shows bookmark symbols, for instance.

Align On...		This command aligns lines in the

Action Name	Shortcuts	Description
		selected block or whole document on the column given by a regular expression that you will be prompted for.

If you give an empty pattern it will align on the first non-blank character by default.
If the pattern has a capture it will indent on the captured match.

Examples:
With '-' it will insert spaces before the first '-' of each lines to align them all on the same column.
With ':\s+(.)' it will insert spaces before the first non-blank character that occurs after a colon to align them all on the same column. |
| Apply Word Wrap | | Use this to wrap the current line, or to reformat the selected lines as paragraph, to fit the 'Wrap words at' setting in the configuration dialog.

This is a static word wrap, meaning the document is changed. |
| Auto Reload Document | | Automatic reload the document when it was changed on disk |
| Automatic Spell Checking | Main: Ctrl+Shift+O | Enable/disable automatic spell checking |
| Backspace | Main: Backspace

Alternate: Shift+Backspace | |
Block Selection Mode	Main: Ctrl+Shift+B	This command allows switching between the normal (line based) selection mode and the block selection mode.
Capitalize	Main: Ctrl+Alt+U	Capitalize the selection, or the word under the cursor if no text is selected.
Change Dictionary...		Change the dictionary that is used for spell checking.
Clean Indentation		Use this to clean the indentation of a selected block of text (only tabs/ only spaces).

You can configure whether tabs should be honored and used or replaced with spaces, in the configuration dialog. |
| Clear All Bookmarks | | Remove all bookmarks of the current document. |
| Clear Dictionary Ranges | | Remove all the separate dictionary ranges that were set for spell |

katepart

Action Name	Shortcuts	Description
Add Byte Order Mark (BOM)		Enable/disable adding of byte order marks for UTF-8/UTF-16 encoded files while saving
Add Caret above Cursor	Main: Ctrl+Alt+Up	Adds a caret in the line above the current caret.
Add Caret below Cursor	Main: Ctrl+Alt+Down	Adds a caret in the line below the current caret.
Add Cursors to Line Ends	Main: Alt+Shift+I	Creates a cursor at the end of every line in selection.
Align On...		This command aligns lines in the selected block or whole document on the column given by a regular expression that you will be prompted for.

Action Name	Shortcuts	Description
		If you give an empty pattern it will align on the first non-blank character by default. If the pattern has a capture it will indent on the captured match. *Examples*: With '-' it will insert spaces before the first '-' of each lines to align them all on the same column. With ':\s+(.)' it will insert spaces before the first non-blank character that occurs after a colon to align them all on the same column.
Apply Word Wrap		Use this to wrap the current line, or to reformat the selected lines as paragraph, to fit the 'Wrap words at' setting in the configuration dialog. This is a static word wrap, meaning the document is changed.
Auto Reload Document		Automatic reload the document when it was changed on disk
Automatic Spell Checking	Main: Ctrl+Shift+O	Enable/disable automatic spell checking
Backspace	Main: Backspace Alternate: Shift+Backspace	
Block Selection Mode	Main: Ctrl+Shift+B	This command allows switching between the normal (line based) selection mode and the block selection mode.
Capitalize	Main: Ctrl+Alt+U	Capitalize the selection, or the word under the cursor if no text is selected.
Change Dictionary...		Change the dictionary that is used for spell checking.
Clean Indentation		Use this to clean the indentation of a selected block of text (only tabs/ only spaces). You can configure whether tabs should be honored and used or replaced with spaces, in the configuration dialog.
Clear All Bookmarks		Remove all bookmarks of the current document.
Clear Dictionary Ranges		Remove all the separate dictionary ranges that were set for spell checking.
Clipboard History Paste	Main: Ctrl+Alt+Shift+V	
Comment	Main: Ctrl+D	This command comments out the

Action Name	Shortcuts	Description
		current line or a selected block of text. The characters for single/multiple line comments are defined within the language's highlighting.
Copy	Main: Ctrl+C Alternate: Ctrl+Ins	Use this command to copy the currently selected text to the system clipboard.
Copy as HTML		Use this command to copy the currently selected text as HTML to the system clipboard.
Cut	Main: Ctrl+X Alternate: Shift+Del	Cut the selected text and move it to the clipboard
Decrement Number by 0.1		
Decrement Number by 1		
Decrement Number by 10		
Delete Line	Main: Ctrl+K	
Delete Next Character	Main: Del	
Delete Tag Under Cursor		
Delete Word Left	Main: Ctrl+Backspace	
Delete Word Right	Main: Ctrl+Del	
Deselect	Main: Ctrl+Shift+A	If you have selected something within the current document, this will no longer be selected.
Duplicate Selected Lines Down		
Duplicate Selected Lines Up		
Dynamic Word Wrap		If this option is checked, the text lines will be wrapped at the view border on the screen. This is only a view option, meaning the document will not changed.
Dynamic Word Wrap Indicators		Choose when the Dynamic Word Wrap Indicators should be displayed
Editing		
Emmet		
Encoding		
End of Line		Choose which line endings should be used, when you save the document
Enlarge Font	Main: Ctrl++	This increases the display font size.

Action Name	Shortcuts	Description
	Alternate: Ctrl+=	
Evaluate a Simple Math Expression		
Expand Abbreviation		
Export as HTML...		This command allows you to export the current document with all highlighting information into a HTML document.
Find Next	Main: F3	Look up the next occurrence of the search phrase.
Find Previous	Main: Shift+F3	Look up the previous occurrence of the search phrase.
Find Selected	Main: Ctrl+H	Finds next occurrence of selected text.
Find Selected Backwards	Main: Ctrl+Shift+H	Finds previous occurrence of selected text.
Find and Select All Occurrences	Main: Ctrl+Alt+Shift+J	Finds all occurrences of the word under cursor and select them.
Find and Select Next Occurrence	Main: Alt+J	Finds next occurrence of the word under cursor and add it to selection.
Find...	Main: Ctrl+F	Look up the first occurrence of a piece of text or regular expression.
Fold Toplevel Nodes	Main: Ctrl+Shift+-	
Format Indentation		Use this to auto indent the current line or block of text to its proper indent level.
Go to Line...	Main: Ctrl+G	This command opens a dialog and lets you choose a line that you want the cursor to move to.
Go to Matching Bracket	Main: Ctrl+6	
Go to Next Edit Point		
Go to Next Editing Location	Main: Ctrl+Shift+E	
Go to Next Modified Line		Move downwards to the next modified line.
Go to Previous Edit Point		
Go to Previous Editing Location	Main: Ctrl+E	
Go to Previous Modified Line		Move upwards to the previous modified line.
Increment Number by 0.1		
Increment Number by 1		
Increment Number by 10		
Indent		Use this to indent a selected block

Action Name	Shortcuts	Description
	Main: Ctrl+I	of text. You can configure whether tabs should be honored and used or replaced with spaces, in the configuration dialog.
Insert Smart Newline	Main: Shift+Return Alternate: Shift+Enter	Insert newline including leading characters of the current line which are not letters or numbers.
Insert Tab Character		
Insert a Newline Above Current Line	Main: Ctrl+Alt+Return Alternate: Ctrl+Alt+Enter	Insert a new line above current line without modifying the current line.
Insert a Newline Below Current Line	Main: Ctrl+Shift+Return Alternate: Ctrl+Shift+Enter	Insert a new line below current line without modifying the current line.
Insert a Non-Indented Newline	Main: Ctrl+Return Alternate: Ctrl+Enter	Insert a new line without indentation, regardless of indentation settings.
Invoke Code Completion	Main: Ctrl+Space	Manually invoke command completion, usually by using a shortcut bound to this action.
Join Lines	Main: Ctrl+J	
Lowercase	Main: Ctrl+Shift+U	Convert the selection to lowercase, or the character to the right of the cursor if no text is selected.
Mark Currently Selected Occurrence as Skipped	Main: Alt+K	Marks the currently selected word as skipped.
Move Cursor Left	Main: Left	
Move Cursor Right	Main: Right	
Move Cursor to Matching Tag		
Move Cursor to Next Matching Indent	Main: Alt+Shift+Down	
Move Cursor to Previous Matching Indent	Main: Alt+Shift+Up	
Move Lines Down	Main: Ctrl+Shift+Down	
Move Lines Up	Main: Ctrl+Shift+Up	
Move Word Left	Main: Ctrl+Left	
Move Word Right	Main: Ctrl+Right	
Move to Beginning of Document	Main: Ctrl+Home	
Move to Beginning of Line	Main: Home	
Move to Bottom of View		

Action Name	Shortcuts	Description
